Description

Tired of having my recipes all over the place, I decided to build a recipe storage app to store them all in one location digitally.

*My goal is to have the app build weekly meal plans by randomly selecting recipes.

Features

- User account creation
- Add recipes
- User can create categories to sort recipes by

Planning - User Stories

The user can input their recipes to be saved in the database. Users will have their own accounts for their recipes.

Planning - Database

Describe what tables are necessary in your DB, and how they relate to one another. Your goal is to show how you designed your database to allow for the user stories listed above.

Technology Stack

- Java
- Spring Boot
- Thymeleaf
- PostgreSQL
- Bootstrap

Demo

What I Learned

- How to use Postgres
- How to build an app from scratch
- How to implement bootstrap theme
- Integrate Javascript into a Thymeleaf template

What's Next

- Adding random generator to generate lists of recipes
- Adding option to add a photo to recipe
- Learning ways to potentially deploy application
